

Chapter 4: Peak Oil

<http://energybulletin.net/news.php>

EnergyBulletin.net is a “clearinghouse for current information regarding the peak in global energy supply.” They publish innovations and solutions, as well as current oil and gas production data and important announcements from international organizations.

<http://www.opec.org/home/>

The Organization of Petroleum Exporting Nations is “made up of eleven developing nations, whose economies rely on oil export revenues. One of OPEC’s primary missions is to achieve stable oil prices, which are fair and reasonable for producers and consumers.”

<http://www.theoil Drum.com/>

The Oil Drum is a discussion forum on the topic of peak oil. The main contributors all believe that as the cheap supply of oil dries up, there will be massive changes to our society: this is a major theme of their posts.

<http://www.peakoil.net/>

The Association for the Study of Peak Oil and Gas is a central node with links to ASPO websites for Australia, France, Ireland, the USA and other countries. It also contains extensive news articles.

<http://www.iags.org/index.html>

The Institute for the Analysis of Global Security considers itself a public educational organization. Focusing on energy security, the Institute tries to engage the public and alert them to the impact that energy dependency has on the economy and security.

<http://www.postcarbon.org/>

The Post Carbon Institute’s mission is “to assist communities in the effort to relocalize and adapt to an energy constrained world.” The website is also linked to the oil depletion protocol website.

<http://www.odac-info.org/>

The Oil Depletion Analysis Centre is a British non-government organization which hopes to increase public awareness of the world’s oil-depletion problem. They achieve their goals through facilitating information exchange and monitoring developments in the depletion of oil.

<http://www.cera.com/asp/cda/public1/about/about.aspx>

The Cambridge Research Energy Associates is an “leading advisor to international energy companies, governments, financial institutions, and technology providers.” It prides itself on the delivery of independent energy market analysis and strategy.

<http://www.globaloilwatch.com/>

Global Oil Watch is a news and resource site relating to oil and energy. The site also contains an ‘oil and gas glossary’, and a relevant section of downloadable research materials.
